*GRAND HEAT*

**“CHRISTO”**

*Multi-Function Glass Front Heater*

*Open Fire Place Insert*

*or*

*Alfresco Centre Piece*

# Christo

The *Christo* range of "Grand" heating appliances takes the wonders of natural wood heating to a new level, while remaining true to the "wise living" philosophy of strength and simplicity.

## *The Magic of an Open Fire*

Enjoy the ambience of a real log fire through the extravagantly large glass door or when the occasion calls, simply lift away the special double acting door to reveal the charm and atmosphere of the flickering flames of a *real* open fire.

Your house will become a home with the wonderful rich warmth that only the luxury of wood fire heating can provide.

This combined with the cost savings gained through the burning of natural renewable fire wood - an important consideration with renewable energy playing such a vital role in today's world. It is worth noting that fire wood is also considered to be green house neutral.

The *Christo* is as much at home in a formal living room as it is in a utility family room, and with changing lifestyles, they are also now being installed in many alfresco areas to make these semi outdoor living areas comfortable throughout the entire year. The imposing appearance and enormous heating potential is well suited to any area requiring large heating ability.

The *Christo* has the potential of providing the highest heat output of any heater and can warm up to 400 square metres of living area. The large capacity firebox not only provides for generous heat output but also allows for extended burn times between refuelling - an important consideration with today's busy lifestyle.

## *Easy Operation and Cleaning*

The *Christo* has easily accessible air controls which allows combustion air to enter the fire from different directions giving even combustion throughout the firebox. \*The air controls are available in a chrome or black finish. The *Christo* has an ash tray fitted to allow for easy removal of ash while still maintaining the benefits of an ash bed heating system. A fire poker and multi-purpose tool is also provided to allow for easy operation of the unit.

## *Cooking with Wood*

For those who appreciate the delights of wood fired roast, pizzas and bread or just want billy tea or brewed coffee all *Christo*'s can be optioned with a "cooking crane" and accessories to make the *Christo* truly the most versatile heating appliance on the market.

## *Christo Free Standing Installation Kit*

The Free standing fire box surround allows all the *Christo* units to be installed without the need to build a purpose built non combustible enclosure. The free standing version will be more suitable for some homes and can save on installation cost. The free standing firebox is available in a range of designer colours to suit specific colour schemes if required.

## *Fan Forced Option:*

All *Christo*'s including the Free Standing & Inbuilt Units can be optioned with a Thermostatically Controlled Fan

OR

## *Christo Ducted Heating*

Because of the *Christo*'s versatile design, the unit can be installed to provide not only rich radiant slow combustion heat into the room in which it is located but where the installation allows the *Christo* can provide ducted heating to other areas of the home.

## Ducted Hot Air Central Heating with the Christo Ducted Installation Kit

The fully integrated, automatically controlled ducting installation kit utilises the huge heating potential of the *Christo*. The hot air ducting system delivers heat from the *Christo* directly to other areas to give a more even temperature throughout the home or deliver heat to areas which are difficult to reach. The delivery of the heat is controlled thermostatically.

### Christo - Heater only fire place insert (standard door)

The standard *Christo* has a single acting glass firebox door which opens like any standard heater door to allow for refuelling and tending of the fire. The firebox door is designed with its own air inlets to help the door burn clean and extend the time between cleaning.

### Christo - Heater/open fire place insert with open fire place option (double acting fire box door)

This *Christo* combines all the features of the standard "grand" heater with the option of using the unit as an open fire when entertaining or for those quiet romantic evenings when the charm and crackle of an open fire adds just the right ambience.

The door not only works as a standard fire box door but also unclips so that the door and the door frame lifts up and disappears behind the fascia revealing the entire firebox as a warm glowing open fire.

## Christo Duo (two sided unit)

The *Christo Duo* is a double sided heater which has two huge glass doors and is ideally suited for installation between two rooms or as a central feature within a room. The *Duo* comes with a standard single acting door on one side and a double acting door (for open fire effect) on the other side. The *Christo Duo* provides large space heating into the room or rooms in which it is installed. The unit has air controls on both sides and so can be refuelled and controlled from either side. The *Christo Duo* is also available with two standard single acting doors if the open fire effect is not required.

## Christo Hot Water Wet Back

The *Christo* can be factory fitted with a 5 kw or 8 kw hot water jacket to boost domestic hot water storage systems. The 8 kw boiler will provide enough hot water for the largest family or alternatively may be employed to provide both domestic hot water and to run a heated towel rail in the bath room or small hydronic radiator.

## Heat your Hot Water while you warm your home

As with all dynamic series heating and cooking appliances they can be successfully combined with "Solar-Mio" efficient, reliable, cost effective solar hot water systems to provide additional hot water free from the sun, which can be combined with the wet back to supply piping hot water for the family's needs.

*The Christo is surely the pinnacle of natural wood fired heating.*
